

Router receiving fiber optic signal

Overview

Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled "ONT" or "Fiber"). Fiber optic technology represents a revolutionary advancement in connectivity, transmitting data via pulses of light through thin strands of glass or plastic fibers. This method enables significantly faster speeds and greater stability compared to traditional copper-based connections. The ONT is linked to your router or gateway using an Ethernet cable. Check availability first by contacting your internet service provider or visiting their website—fiber now passes over 76 million.
