

# Safe distance between network cabinets and wall columns

## Overview

Maintain a minimum clearance of 1.2 meters (4 feet) between equipment cabinets/racks and any perimeter wall or adjacent equipment installed along perimeter walls. This provides sufficient space for maintenance, airflow, and safety. The width of the walkway between the side of the cabinet and the wall should not be less than 1000mm; the width of the walkway between two parallel rows of cabinets should not be less than 1500mm. The spacing arrangement of cabinet rows should be comprehensively determined based on the size of the. This is the distance between the two front posts of the four-post EIA racks. 6 cm) to allow for the bend radius of FC port fibre-optic patch cables. Minimum clearances are established for work spaces in front of high voltage - electrical equipment such as switchboards, control panels, switches, circuit breakers, switchgear and motor controllers. Four-post EIA cabinets (perforated or solid-walled) must meet the following requirements: The minimum spacing for the bend radius for fiber-optic cables should have the front-mounting rails of the cabinet offset. The National Electric Code requires minimum 3 foot clearance for energized electrical panels.
