

Should fiber optic cables for broadcasting be dual-mode or single-mode

Overview

Whether you choose single-fiber BiDi for fiber savings or dual-fiber for simplicity, the fundamentals are the same: match speeds and wavelengths, plan your connectors, and keep optics clean. There are two main types of fiber optic cables: single mode and multimode. Although they can do the same job in some instances, the different construction methods make each of them better suited to certain tasks and budgets. That makes picking between single mode and multimode fiber optic cables an. OS1 single mode fiber optic cables are made with a single mode fiber core, which means that they have a very small core diameter of 9 microns. They both have their sweet spot, and knowing which one fits your organization's needs can help you make the right choice.
