

# Spectrometer Recording

## Overview

Close the lid, and use the computer or keyboard controls on the spectrophotometer to begin scanning the wavelengths and recording absorbance measurements. Once the instrument is finished collecting data, prepare a plot of absorbance versus wavelength. This technique is powerful because certain compounds will absorb different wavelengths of light at different concentrations. Concentration in Percent (Weight/Volume = w/v) By definition, percent means "in a hundred" and by convention, a 10% w/v solution contains 10 grams of a solute in a total volume of 100 ml of the solution. Place the cuvet in the cell compartment. Again, be sure that the clear faces of the cuvet are perpendicular to the light source and that the mark. Real-time audio visualizer that generates spectrograms in your browser using WebGL. Supports different color schemes and other customization options. Spectrometry, a distinction is made according to the range of the electromagnetic spectrum into radio waves (NMR), microwaves, infrared, UV-VIS, X-ray and gamma-ray spectrometry, according to the type of interaction in absorption, emission, reflection and scattering spectrometry as well as by the.
