

# Standards for Steel Structures of Cable Tray Supports

## Overview

The International Electrotechnical Commission (IEC) provides detailed guidelines for cable tray systems under IEC 61537. This standard outlines the construction requirements, testing methods, and performance parameters for cable trays and related support systems. For proper installation, design, and maintenance, adherence to international standards is essential. The Cable Tray ng standards, performance standards, test standards and application in this document have been tested extensively by competent professional engineers completely installed, without damage either to conductors or their supports. This appendix provides the design criteria for seismic Category I cable trays and their supports. These racks safely support and organize electrical cables, ensuring durability, accessibility, and safety.
