

# Static Efficacy of Fiberglass Cable Trays

## Overview

While fiberglass cable tray systems utilize a heat-cured resin that doesn't melt at higher temperatures, it's important to realize there is a slight loss of rigidity at continuously elevated temperatures. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray is used for instrumentation and control applications that require additional protection to support and protect numerous small. Span support criteria shall be as specified (Reference the following table): 3. Nominal loading depth (as required): 2" (51mm), 3" (76mm), 5" (127mm), 7" (178mm) and 9" (229mm) 4. For International Standards, the manufacturer shall declare the tray system Safe Working Load (SWL) per the. For more than 30 years, MP Husky's Fiberglass Cable Tray systems have been tested and proven in the harsh environment of the offshore Oil & Gas industry. With a world-class quality testing laboratory, Enduro ensures consistent and reliable product performance through comprehensive programs of quality control. GRP trays offer low installation costs, and non-conductive and lightweight properties, making fiberglass cable trays the most effective solution available for a.
