## Overview

TN-C-S earthing system (or TN-C-S system): a distribution system in which one live part of a power source is earthed, exposed-conductive-parts of an electrical installation are connected to the earthed live part of the power source in a head part of the electrical. TN-C-S earthing system (or TN-C-S system): a distribution system in which one live part of a power source is earthed, exposed-conductive-parts of an electrical installation are connected to the earthed live part of the power source in a head part of the electrical. Earthing is the connection of the neutral point of a power supply system to the earth. In the UK, this arrangement is known as PME (Protective Multiple Earthing) and is the. This guide explains and compares the four main low-voltage earthing types you'll meet in the UK—TN-S, TN-C-S (PME), TT and IT—using clear diagrams and plain language. You'll learn what the IEC/BS code letters mean, how automatic disconnection of supply works, the pros and cons of each system, and. The latter is very common as it allows the single-phase loads to be supplied by phase and neutral with a completely separate earth system connecting together all the exposed conductive parts before connecting them to the PEN conductor via a main earthing terminal which is also connected to the. A Definitive Guide to TNCS Earthing System [linquip.com/blog/tncs-earthing-system/](http://linquip.com/blog/tncs-earthing-system/) November 23, 2020 Earthing is the connection of the neutral point of a power supply system to the earth.
