

The electrical box assembly is very noisy

Overview

The problem may be something as simple as a loose wire. It could be a faulty or damaged circuit breaker. It's also possible that someone has overloaded the breaker box in an attempt to squeeze more circuits into an outdated unit. So when you begin to hear buzzing, clicking, or humming sounds coming from it, it's understandable to feel uneasy. Even in a busy Ottawa summer, it's hard. The panel's function is protection, housing circuit breakers that automatically interrupt the flow of electricity during an overload or short circuit. I didn't notice until I tried to sleep that it makes a loud tick-tock kind of noise. Google says this is a spa or pool electrical panel but there. Distribution boxes are the unsung heroes of our electrical systems, quietly managing power until something goes wrong. In this guide, we'll walk through these.
