

The function of the fiber optic cable in a duplex coupler

Overview

Duplex Adapter: A duplex adapter allows the connection of two pairs of fibers, enabling bi-directional communication. They enable seamless and reliable optical signal transmission between different fiber optic cables, connectors, or devices. Usually, optical signals are attenuated more in an optical coupler than in a connector or a splice because the. Fiber optic couplers are optical devices that connect three or more fiber ends, dividing one input between two or more outputs, or combining two or more inputs into one output. Unlike active devices like switches or transceivers, couplers require no electrical power to function. Because there are so many technical possibilities for plugs and splices [Hub 92, Ebe 10], we would like to focus here primarily on general aspects to consider.
