

The suspended platform's electrical distribution box is energized

Overview

The control box is connected to the platform's motors and other components through cables and wiring, and it may be powered by either mains electricity or a portable generator. This control box features overload protection, emergency stop, phase loss protection, limit switch. The design of the suspended platform control box revolves around the two core goals of "safety control" and "stable operation", mainly encompassing the following four functions: 1. Control Elements: The Core Operation Module for Startup and Operation The control box integrates various control. Such switches or controls shall be of approved design and construction and shall be properly installed. 12003 Trailing cable overload protection. Hengxiang is committed to providing customers with.
