

# The time cable for testing cannot be too short

## Overview

The ISO/IEC and TIA standards for twisted pair category cables (CatXx) define a testing length of 100m. Nevertheless, for Cat8 with majority of applications within the data centres, the standards set a length of 30m. Although. When testing Impedance, the minimum cable length for an impedance measurement is 13ft / 4m. The impedance measurement shows the approximate characteristic impedance of the cable at a point approximately 13 ft (4 m) from the tester. Figure 1b shows the measured input impedance of the same cable/short as a function. The purpose of this presentation is to address some concerns in the cable test requirements proposed at working group on Dec. 1 Hz (Goodwin, Oetjen, and Peschel ). If a circuit is considered as important, e.
