

Three-dimensional routing of cable trays

Overview

Select a containment product and define alignment, elevation, offset, and bend and branch types and you are ready to start modelling. Abstract— This thesis presents a comprehensive approach to optimize the routing of cableway networks in industrial environments through the development of a Python-based analytical code. This code acts as a tool that integrates multiple data sets, performs intricate data cleaning, and takes. We already have a software for 3D cable route planning “Caneco One” which allows the import of DWG files. However, Caneco does not recognize any Plant 3D properties from the file such as instrument TAG. With these applications, it is possible to model cable trays and conduits, design supports, and calculate cable routing.
