

Tunisian OSFP optical module OSFP

Overview

OSFP (Octal Small Form Factor Pluggable) is a pluggable optical transceiver interface standard that supports eight electrical lanes (Tx/Rx) per module. Each lane can operate up to 100G PAM4, allowing total bandwidths of 400G or 800G depending on configuration. This specification defines the electrical connectors, electrical signals and power supplies, mechanical and thermal requirements of the OSFP Module, connector and cage systems. Unlike the backward-compatible QSFP-DD, OSFP introduces a slightly larger mechanical form to. OSFP (Octal Small Formfactor Pluggable) is a high-speed optical module packaging technology designed to meet the growing demand for ultra-high bandwidth and density in modern data centers and high-performance computing networks. Here is an introduction to OSFP optical modules. It is designed to accommodate future networks' increasing data rate demands, specifically the 400G Ethernet.
