

VCI surface treatment for cable trays

Overview

The energy-saving steel cable tray using high corrosion resistance VCI (gas phase corrosion inhibition) bimetallic composite coating technology has high load strength and long-term resistance to salt spray and chemical gas corrosion, providing electrochemical cathodic protection for. The energy-saving steel cable tray using high corrosion resistance VCI (gas phase corrosion inhibition) bimetallic composite coating technology has high load strength and long-term resistance to salt spray and chemical gas corrosion, providing electrochemical cathodic protection for. The bridge frame has undergone VCI bimetallic coating surface anti-corrosion treatment, which has extremely strong corrosion resistance. Its advantages are as follows: 1. The VCI coating has good adhesion with the steel plate, making the adhesion of the coating layer reach zero level; 2. VCIs are often used in situations where it is impractical or undesired to use rust-preventative liquids or other surface. ACOBAL designs and manufactures packaging trays incorporating corrosion inhibitors (VCI), perfectly suited to the parts to be transported. Developed based on customer specifications, they offer a customized solution for cushioning, corrosion protection, and packaging. It offers true freedom by allowing multiple configurations in a wide choice of finishes for optimal integration into any environment. Trays and containers of corrugated board coated on one side with VCI or laminated with a VCI film are suitable for disposable.

Vapor Corrosion Inhibitor Technology (VCI)

Zerust® Vapor Corrosion Inhibitor Technology Solutions What Are Vapor Corrosion inhibitors? How Do Vapor Corrosion Inhibitors Work? Zerust's Top (VCI) Vapor Corrosion Inhibitor Technology Products Physical Material Design and Selection Chemical Scavenging Technology Vapor corrosion inhibitors (VCIs) are substances that slowly release a corrosion-preventative compound into a sealed air space, effectively protecting exposed metal surfaces. VCIs are often used in situations where it is impractical or undesired to use rust-preventative liquids or other surface treatments.
