

# View the MAC address table of the access switch

## Overview

To kick things off, it's essential to know how to view the MAC address table on your Cisco device. The MAC (Media Access Control) address is a 48-bit physical identity of a device used to uniquely identify a device in layer 2 of the OSI model. It is represented in hexadecimal. The switch keeps. Can someone show me the commands to find a mac-address on a switch and if I know the port I am looking to find it on, also how i find the IP address on that port 06-07-2016 09:05 AM 06-07-2016 09:05 AM 06-07-2016 09:23 AM you don't need layer 3 device, will work fine on layer 2 switch as long ip &. This process is called building the MAC address table. How do i get the mac address for only the connected access ports of that particular switch only. One of the key functionalities of a switch is its ability to build and maintain a MAC (Media Access Control) address table.
