

Warning for outdoor electrical distribution boxes

Overview

Low voltage distribution box outdoor use requires IP65 or NEMA 4X ratings, corrosion-resistant materials, and proper sealing for lasting weather protection. A quiet hum behind a wall, a faint metallic odor in the basement, or lights that dim when appliances run — these are the kinds of signs that prompt homeowners to look more closely at the heart of their household power system. But where elements and electricity meet safety must come first. That's what outdoor electrical boxes. Outdoor low-voltage power distribution boxes (hereinafter referred to as "distribution boxes") are low-voltage distribution equipment used in 380/220V power supply systems to receive and distribute electrical energy. Since these boxes are accessible to the public, improper handling can lead to dangerous situations, especially if water is present or if objects are placed inside.
