

What is KST in relay protection

Overview

The KST relay takes advantage of the distinction between a fault and an out-of-step condition. Under out-of-step conditions, the KST relay will operate the OS telephone-type relay. When the telephone relay, OS, is energized ahead of KD relay, by the closing of ZOS cylinder unit normally open contacts, it opens and closes its several sets of contacts which are normally connected in series with the KD relay contacts. It does not prevent or delay the type KD relay condition. 2 'Electrical Power System Device Function Numbers, Acronyms, and Contact Designations' deals with protective device function numbering and acronyms. : 4 The first. Combines protection, sensors, control power, and circuit breaker in a single package Typically added to a breaker close circuit to prevent accidental reclosure after a trip. Three fundamental components required for each circuit breaker.
