

What is the function of patch cords in fiber optic lines

Overview

A fiber patch cord is a short optical fiber cable designed to connect two fiber optic devices, typically with connectors on both ends. It serves as the link between network devices such as routers, servers, switches, patch panels, or optical distribution frames. ZION Communication supplies both standard patch cords and custom assemblies to match your equipment, distance, and installation. Optical Fiber Patch Cord is the cable assemblies with connector plugs at both ends, used to achieve flexible and plug-and-play fiber optic connections between devices or between devices and fiber optic patch panels. These cables play a vital role in modern communication systems by ensuring fast and reliable data transfer. Unlike backbone trunk cables—which are typically multi-fiber.
