

What material is the flange of a fiber optic coupler made of

Overview

It secures and ensures alignment during connector mating and is typically made from a hardened material such as ceramic, stainless steel or polymer. The ferrule can be plastic, ceramic, metal, or glass and is usually cylindrical with a hole through the center. Flange - This material holds the ferrule in the housing. Ferrules are typically mated to the connector. Most fiber optic connectors are plugs or so-called "plug" or "male" connectors with a protruding ferrule that holds the fibers and aligns two fibers for mating. Definition: A device for detachable (movable) connection between an optical fiber and an optical fiber. All couplings comply with the corresponding Standards IEC 61754-4 and GR-326 for single-mode and multimode technology.
